

PAVILION FABRIC
COVERED
BUILDINGS

CREATING AMAZING SPACES

Oil & Gas, Industrial, Recreational, Agricultural, Aerospace, Marine & more ...
Pavilion Fabric Covered Buildings can provide you with the space that is just right – just for you!
Choose from our versatile gallery of pre-engineered structures or we will custom design.

More Steel More Strength More Safety.

Pavilion buildings are 38% stronger than other fabric buildings.

Pavilion has been an industry innovator for over 10 years and is ranked #1 in the industry for strength to price ratio. Pavilion provides our customers with 3 factors to compare against other supplier proposals: square footage of the building; pounds of steel per square foot; and gross weight of steel in building.

What does this mean to the customer?

No other competitor is able to compete with the amount of steel and strength that we offer for the same price we offer. By pricing our buildings by the steel weight of the building, we allow the customer to immediately compare the strength of our buildings against the competition. Pavilion stresses that it is crucial that all customers demand from potential suppliers the weight of steel in any proposed building.

18-Year Hassle Free warranty!

Pavilion's focus on quality not only means you get the strongest building available, but also the safest and most durable – today and for the entire lifecycle of the structure. We are so certain about our designs and specifications that we offer an 18-year hassle free warranty on all our structures.

**Limitless
Applications.**

Pavilion supplies and supervises all site specific engineering services to ensure compliance and quality assurance.

Pavilion employs and coordinates local contractors with expertise to supply needed construction and utility services.

More Space.

Applications:

- Aerospace**
- Aviation**
- Agricultural**
- Commercial**
- Industrial**
- Mining**
- Recreational**

Pavilion structures are site specifically engineered to withstand the wind and snow loads for each individual project and are engineered for use worldwide. Project specific engineer-sealed drawings are provided for all projects, ensuring the building is certified and designed accordingly for the local and national building codes. This allows for ease in obtaining all permit documentation. Any custom design work required for a project is automatically included in the engineered package provided. Pavilion does not provide generic drawing packages – each engineering package is site and project specific, which reduces permit processing and building time to complete – that saves you time and money!

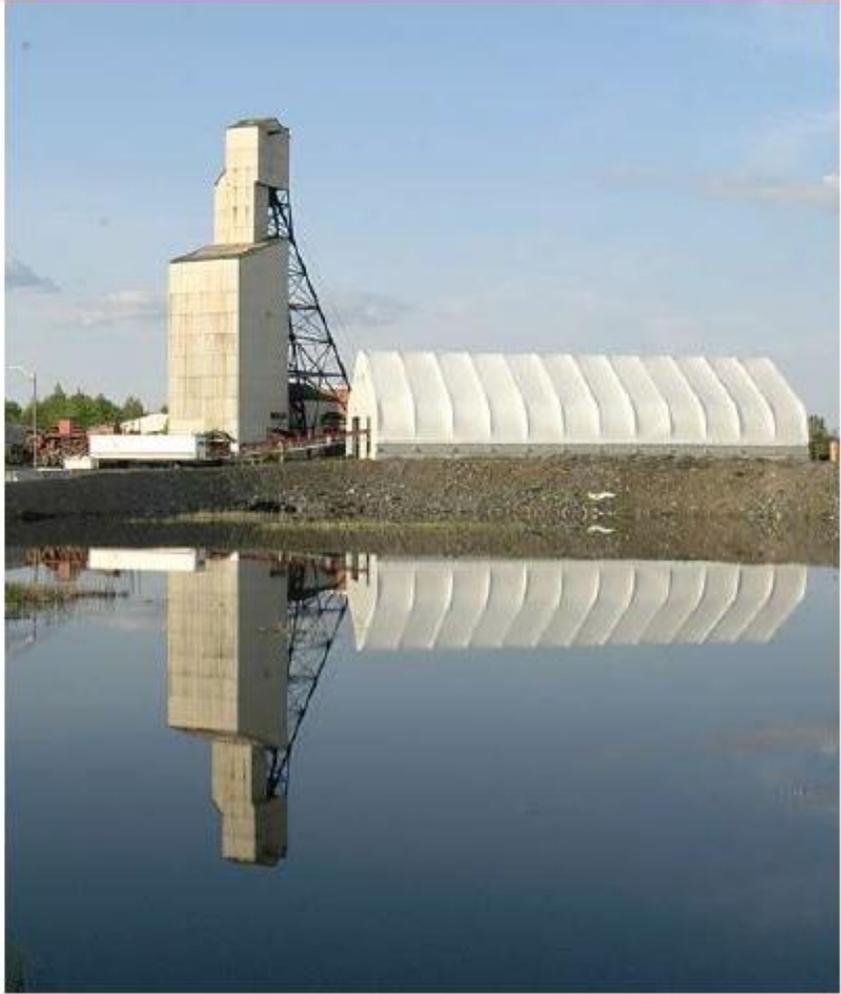

**Customizable
Versatile.**

Buildings are designed and constructed to meet all your needs and requirements – including any optional flooring, lighting or insulation systems.

Your Location Your Needs – Our Focus.

Whether you choose a pre-engineered design or a custom building solution, we focus on your specific needs to ensure that each project is best suited to fulfill your requirements and considers all local weather conditions and building code specifications. You get what you need!

Fire retardant Spider Weave fabric is standard on all installations to make use of natural light and can be tailored to individual requirements to allow for insulation. Custom fabrics are available for specialty use applications or local considerations.
